Note: The color chips on this color guide may differ slightly from the actual ink color. Chips could be used as a guideline only. This is due to the differences of production method such as ink color, thickness, opacity and backgrounds. Always test actual substrate before beginning print production. See back cover for more information.

FLEX WHITES

COTTON WHITE

Our premium white for 100% dark and light shirts. It's creamy easy printing consistency provides a smooth surface. The low tack formula allows printing through finer mesh counts.

SNOW WHITE LV OR HV

Great low bleed white designed for manual presses. This white has a very nice soft texture with a very good opacity. It can be printed through finer mesh.

CASHMERE WHITE

Low bleed white has a very fast flash curing time. It goes through finer mesh. Designed for manual and automatic presses.

SMART WHITE LV OR HV

High opacity low bleed white extremely bright and opaque with a creamy texture. It goes through finer meshes formulated for automatic presses.

POLAR WHITE EMP

A high opacity superior low bleed white formulated to stop dye migration on polyester.

PANDA WHITE

Phtalate free white.

LYCRA WHITE

Exhibits a high elongation and resist cracking when the design is stretched beyond normal proportions. Will cure at a lower temperature.

ACRYSOFT

white phtalate and PVC free.

MIXING WHITE

Designed for Plastimix and Plastopake systems.
